

IN THE ABSTRACT:

Please amend the abstract as follows:

Abstract of the disclosure

~~The present invention provides a method and device for providing additional information related to the contents of a radio broadcast to terminal devices. The invention is more specifically related to radio broadcast having an interactive messaging service. Most specifically the invention is related to a~~ A ~~radio broadcast system using a second communication channel to provide~~provides ~~an interactive functionality. The invention to allows the~~allow a ~~user to know what song or piece of music is playing on the~~ first ~~radio channel and possibly other details about what is being listened to. The method for providing additional information related to the actual contents of at least one radio broadcast from at least one broadcast station, said additional information being available for terminal devices connected to a server in a wireless communication network, comprising receiving at the server~~A ~~data transmission from said~~the broadcast station,~~station is received by a server with said data transmission comprising said additional information about the content of the first channel, and after the server determines~~determining ~~mobile terminal devices to be updated with said~~the ~~additional information, generating~~it generates ~~updating messages comprising said~~the ~~additional information, and updating said~~updates the ~~information to said~~the ~~determined terminal devices via said~~a ~~wireless communication network. The updated information is then received by a~~ given ~~terminal device and displayed on a display of said~~the ~~device.~~
